PROFESSIONAL SUMMARY

Junior Data Analyst candidate with project experience cleaning, querying, analyzing, and visualizing HR, SaaS, and customer-feedback datasets. Skilled in Python, SQL, Excel, Power BI, KPI analysis, dashboard development, and translating findings into business recommendations, with supporting exposure to churn prediction and NLP-based sentiment analysis.

TECHNICAL SKILLS

Languages & Analysis: Python, SQL, pandas, NumPy, Excel, data cleaning, EDA, KPI analysis
BI & Visualization: Power BI, Excel dashboards, Matplotlib, Seaborn, dashboard development
Data & Pipeline Tools: DuckDB, API integration, AWS S3, GitHub Actions, ETL workflows, Git, GitHub
Analytics Methods: Workforce analytics, customer analytics, retention, churn, cohort analysis, segmentation, sentiment analysis
Modeling & Apps: XGBoost, scikit-learn, FastAPI

PROJECTS

SaaS Product Analysis Based on Customer Feedback Python, SQL, Excel, Power BI, AWS S3, GitHub Actions

- Built an end-to-end review analytics pipeline for Zoom, Google Meet, Microsoft Teams, and Cisco Webex, collecting approximately 24,000 Google Play reviews through the FetchLayer API and storing raw JSON outputs by product and chunk.
- Cleaned, validated, and enriched app-review data with Python, including duplicate checks, missing-text checks, rating and date validation, sentiment scoring, topic classification, complaint flags, and feature-request indicators.
- Created incremental ingestion with AWS S3 state files, review-ID tracking, timestamp watermarks, and a manually triggered GitHub Actions workflow; built DuckDB SQL views for product metrics, topic share, rating gaps, sentiment gaps, complaints, and feature requests.
- Delivered Power BI dashboards showing Zoom rating improvement from 3.64 in April to 3.87 in August, a competitor rating advantage of +0.10, and next-quarter priorities around Pricing / Subscription, UI / UX, and Performance / Crashes.

FalconStack SaaS Growth & Retention Analysis Python, SQL, Excel, Power BI, XGBoost, FastAPI

- Cleaned and modeled five SaaS datasets with Python and pandas, producing analysis-ready tables for 537 accounts, 5,309 subscriptions, 26,653 feature-usage records, 1,996 support tickets, and 632 churn events.
- Developed DuckDB-style SQL metric views for customer growth, retention rate, churn rate, cohort retention, MRR movement, NRR, GRR, ARPU, LTV, unit economics, revenue concentration, and segment performance.
- Created Excel and Power BI dashboards showing active customers peaking at 227 in August 2024 before falling to 142 in December 2024, with churn rising from 16.48% in November to 36.82% in December.
- Diagnosed retention risk across feature gaps, budget pressure, support issues, downgrades, trial status, and weak early-life retention; trained an XGBoost churn model with 92% accuracy and 82% churn-class F1, plus a FastAPI scoring UI.

HR Data Analysis Excel, Python, SQL, Power BI

- Cleaned and prepared HR datasets with Python and pandas, including 1,800 employee records, 26,379 leave records, 17,817 training records, performance data, feedback surveys, and resignation data.
- Built SQL analyses for leave cost, voluntary attrition, onboarding, training outcomes, certification completion, and resignation reasons, turning stakeholder questions into reusable KPI outputs.
- Identified R&D as the strongest leave-cost improver, reducing combined leave and absenteeism cost by 26.25% in 2024; measured certified-employee success at 85.49% versus 82.59% for untrained employees.
- Designed a Power BI workforce dashboard covering leave cost, attrition, onboarding, training effectiveness, and resignation trends, including management/team-experience resignations falling from 57.50% in 2023 to 50.00% in 2024.

EDUCATION

B.Sc. in Information Technology (BSIT) Expected 2027
Presidential Graduate School, Kathmandu, Nepal

- Current GPA: 4.0 / 4.0

Higher Secondary Education (+2), Science 2021-2022
Dhulabari Secondary School, Jhapa, Nepal

- GPA: 3.33 / 4.0
